

# AQUACURE® Water Softeners

The **Whole House** solution for removal of:  
**Calcium & Magnesium Hardness**

## Benefits of Softened Water:

- **Your Skin** Smoother skin, relief from some skin irritations. Skin rinses completely clean.
- **Your Hair** Use less shampoo and conditioner with better results and better rinsing. Hair feels softer and silkier with a lively sheen.
- **Your Laundry** Soft, bright clothes. Use less laundry detergent with better results—Improved detergent performance and cleaner more complete rinsing with softened water results in cleaner, brighter fabrics that feel soft and fresh.
- **Your Time** Faster and easier cleaning. No more bath tub ring, calcium coated fixtures or fittings.
- **Your Money & The Environment** Greater efficiency and economy—Prevents build-up of scale in hot water service, dishwasher, pipes, kettles and water appliances. Increases appliance efficiency and cuts repair and water heating costs—No hardness/scale means less energy use. Less soaps and cleaners (up to 70% less)—Enhances performance of detergents, cleaners, soaps, shampoos and conditioners, less waste.
- **Better RO performance** Substantially increased Reverse Osmosis membrane life and performance.

## Two Types of Controller:

### Fully Automatic—Timer Models

Fully automatic Logix 742 electronic time-clock controller. 0.5-99 days regeneration frequency. 7-cycle high-efficiency regeneration sequence. Programmed by our technicians at time of installation for optimum cycle lengths, and regular automatic regeneration based on projected water usage.

### Fully Automatic—Demand Regeneration Models

Logix 762 electronic volumetric controller. 7-cycle high-efficiency regeneration sequence. The Logix 762 monitors the actual water usage and automatically regenerates only as required for optimum water efficiency. Saves salt, water and money compared to manual, 'semi-automatic', timer and previous generation controllers. Programmed by our technicians at time of installation for optimum cycle lengths, and automatic regeneration based on actual water usage.

Both controllers operate on a safe 12V 3W power supply, with 24hr super capacitor time/date backup and 99-year EEPROM memory protection.

*All AQUACURE TS255- & TS268-model Water Softeners include stainless steel pipe adaptors and By-pass Valve as standard.*
